

ACI jetblack blow-off cleaning stations

Introducing the JETBLACK Cleaning Station- an innovative, safe, cost effective solution for the cleaning and de-dusting of personnel and equipment.

PERFORMANCE & SAFETY GUARANTEED

The success of the JETBLACK Cleaning Station is proving that the improper use of compressed air for personnel blow-down has been a serious issue.

Available as a portable or wall-mounted package, the JET-BLACK has been specifically designed to be installed into a factory or clean room environment where dust, dirt, fibres or water need to be effectively removed from personnel clothing, footwear, or for product during the manufacturing process.

The JETBLACK is safe, and easy to use. The unit is powered by a high speed fan unit which produces air pressures of less than 2.5psi, but enough air volume to be able to safely agitate dust and debris from clothing for example.

The JETBLACK poses no danger to operators, and having a blower as the power source and not compressed air has eliminated the issue to contact pressure with any obstacle including direct contact with human skin.

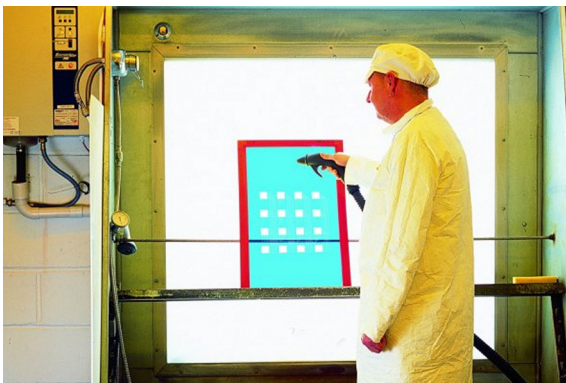

“Over the years we have used a variety of methods for personnel cleaning, including Velcro-type brushes and compressed air, to remove excess material from clothing and allow operatives to go home as they arrived, but nothing seemed to work and meet Health and Safety guidelines until we purchased the JETBLACK Cleaning Station.”

“Initially, we commissioned a ‘Blow Down Booth’ similar to one being used in our mill in Taiwan, but before it was finished we responded to a marketing initiative from ACI offering a new portable or fixed blower/dryer. On purchasing one, we tested it in the worst area, the paper mill. The JETBLACK system has now been widely accepted by all employees and we now have them fitted throughout our site.”

ACI jetblack

blow-off cleaning stations

For your specific needs

- Cleaning
- Drying
- De-Dusting

What could this do for you?

Personnel Cleaning Stations

The low pressure, high volume air produced by the JETBLACK gives users of the unit the comfort of knowing that the system is completely safe to use. It can be aimed at the whole body, and its even safe with direct contact with human skin.

Economy

The JETBLACK also provides costs benefits as it frees up compressor usage allowing stored air to be utilised correctly.

Durability

Made from high grade plastics, the JETBLACK has been designed and constructed to survive in the toughest working conditions.

Features and Options

- 110 or 240V units available
- Noise levels below 78db(A)
- Air Pressures below 2.5psi
- Available in wall-mounted or portable versions
- Optional motor speed-controller and timer-switch
- Anti-Static Pack - assists in the removal of static charge
